OUR COMPANY

WE ARE MANUFACTURERS

For **over 25 years**our passion has been identified with all **your laundry machinery.**

Indemac is a company founded by the Palmarini brothers, Emanuele and Cesare.

Thanks to the considerable experience gained by them in the sector, Indemac is a reality able to offer high-quality services, starting from the idea, the design and construction of **industrial laundry**

and construction of **industrial laundry** machines up to the distribution and the after-sales service.

Our constant commitment is to identify and implement the finest **innovative solutions** to meet our customers' needs by offering competitive products as well as the possibility to create **tailor-made machines and systems**.

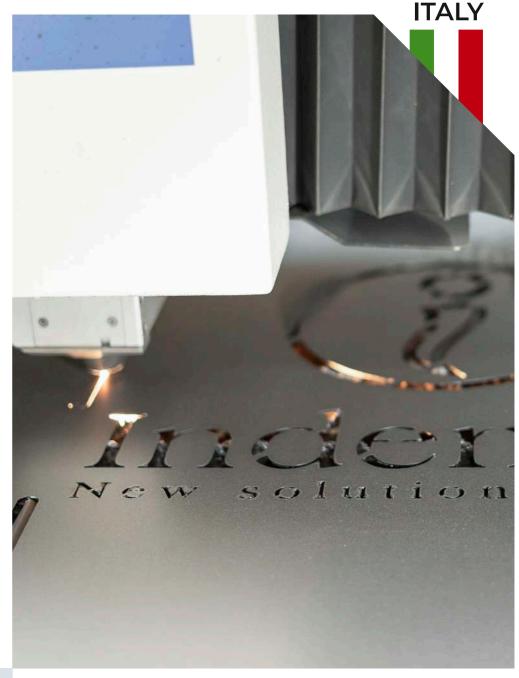

Our ideal customers are both national and international distributors and laundry companies active in catering, accommodation, healthcare and sport facilities sectors.

Flexibility and professionalism are our strengths.

MADE IN ITALY

When an **Italian style** and **innovation** can make a difference.

MADE IN

The Made-in-Italy culture and know-how make our laundry machines unique in their technical innovations, functions

and designing both in Italy and abroad.

The development of our company in a productive and entrepreneurial manufacturing context has been our starting point to combine the characteristics of traditional production processes together with digital and technological innovations.

In 2019, in order to promote the local business culture through the recognition of excellence, the Young Entrepreneurs Regional Committee of Confindustria Marche has acknowledged our company's commitment, passion and continuous improvement by awarding us with the XVI edition of the prestigious "Technology and Innovation" prize.

YEAR 2010 200 sq m

FROM A POTENTIAL TO AN EXPONENTIAL DEVELOPMENT

A constant research and innovation are the main principles of our company's continuous growth.

YEAR 2012

400 sq m

YEAR 2016

1000 sq m

Starting the lines of Laser Cutting, Sheet Metal Processing and Welding.

YEAR 2020

4200 sq m

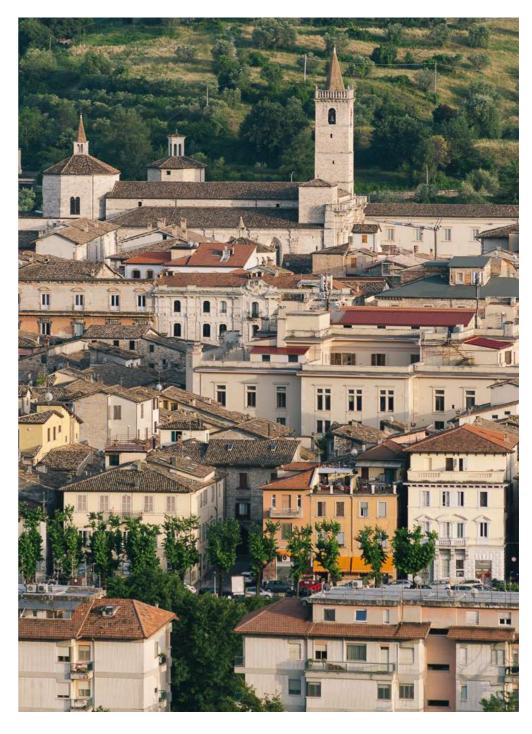

Acquisition of a new production site for a total of 4200 sq m **in 2 plants.**

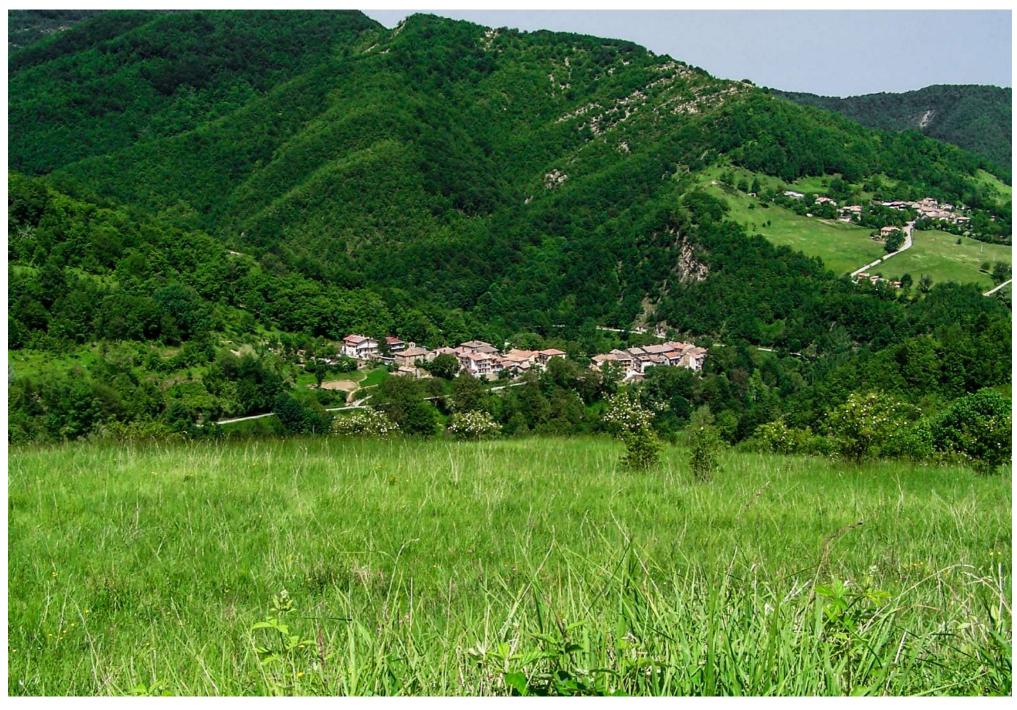

MADE IN PICENO

The Italian peninsula is a land of excellence and in its very center we can find the Piceno area, le Marche, with their hills and mountains very near Abruzzo where the company was founded and has continued to expand.

The Piceno area, in all its varieties that range from the splendid historical center of Ascoli Piceno to the bordering Abruzzo, offers geographical and cultural characteristics that have always created a mutual influence between the local companies and their potential innovation of the territory.

The effect of all this is the guarantee of an industrial structure always respectful of the uniqueness and high customization of the projects.

INDEMAC
IN THE WORLD

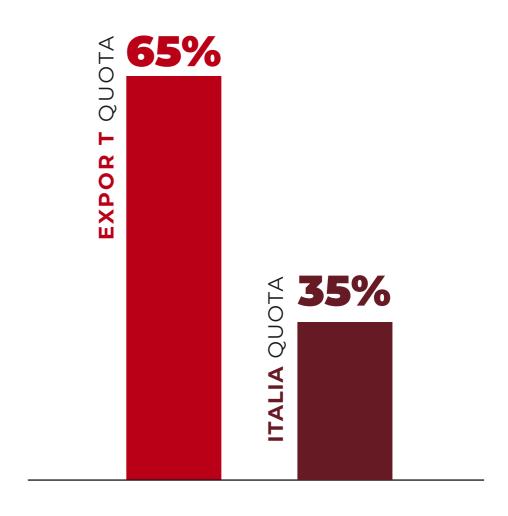

An **ever-growing** reality.

The Made-in-Italy all over the world is a landmark of excellence for the quality of products.

This is also for the industrial laundry sector, where our brand Indemac is a leader and an innovator.

With great satisfaction, we have obtained over time the respect of our customers who have rewarded our commitment that begins with the idea and through the design and production leads to the distribution of Indemac products around the world

Our presence in Italy and abroad is growing strongly. Nationally, our distribution network covers every corner of the Italian peninsula, and at an international level we have rapidly expanded in recent years reaching sales which account for 65% of our total annual turnover.

TAILOR-MADE MACHINERY

Built with **passion** and **innovative processes**.

RESEARCH

We are constantly looking for methods and solutions to create innovative products and services.

MECHANICAL ASSEMBLING

The single components are assembled according to strict internal quality standards.

Indemac products go through a path made up of several steps each of which is dedicated to study them in detail in order to ensure their usability and safety. Our pillar is certainly constant research, because we firmly believe that continuous improvement and competitiveness pass through innovation.

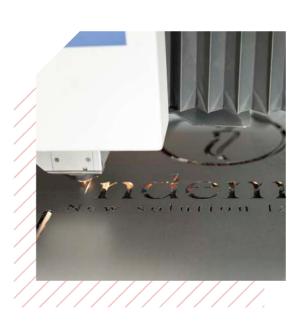

DESIGN

We use highly technological tools to develop our ideas and turn them into unique machines.

ELECTRICAL ASSEMBLING

We assemble the entire electrical system taking care of it down to the smallest detail.

IN-COMPANY PROCESSES

We internally manage the entire production cycle in all its phases.

TESTING

We meticulously test all features to ensure the reliability of our products. Our machines are conceived and designed to meet the different needs of customers.

Our compact and all-in-one machines are mainly developed for companies that need innovative solutions in small dimensions with particular attention to energy saving.

The industrial line, consisting of various machines that work in series, allows you to manage large quantities of linen while maintaining the quality of the result and a high speed of execution so as to optimize the entire work cycle.

Our machines are enriched by a wide range of accessories and customizations to satisfy all requests.

CONSULTANCY

We want to offer you
the solutions that best suit
your needs, which is why
we give you the opportunity
to watch first-hand
our production process
and to experience
the functioning
of our machinery.

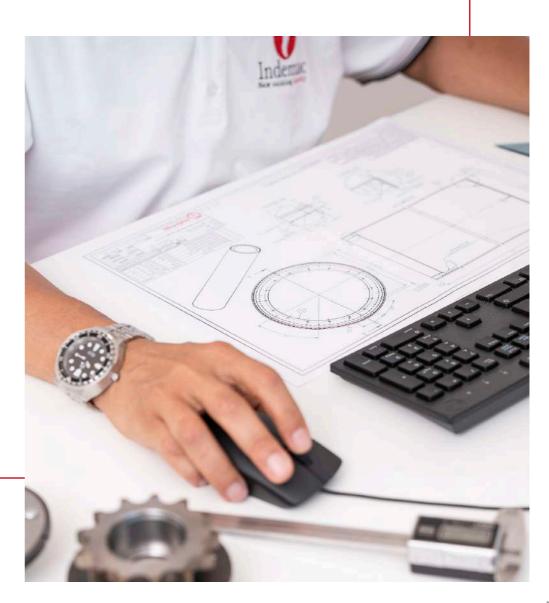

SOFTWARE AND HARDWARE FOR LAUNDRIES

We provide complete software and hardware configurations for machinery and systems for industrial laundries.

TAILOR-MADEPROJECTS

We analyze the feasibility of customized projects, optimizing the organization of the plants, of the work environments and of individual customized machinery also by using realistic layouts.

SPECIALIZED TECHNICAL SERVICE

After-sales service is one of our strengths.

We want to be a valid support in the maintenance and technical knowledge of the machinery with a telephone assistance service, from remote terminal or on site.

SPARE **PARTS**

Specific spare parts kits for each machine are accessories for sale. We also guarantee the shipment of spare parts in a short time in any area.

TRAINING

Each machine has
its own function, which
is why we promote
technical training courses
(periodic
or on request)
to our customers
and distributors.

Our range of products is characterized by innovative and customized solutions with high quality finishing on design and functionality.

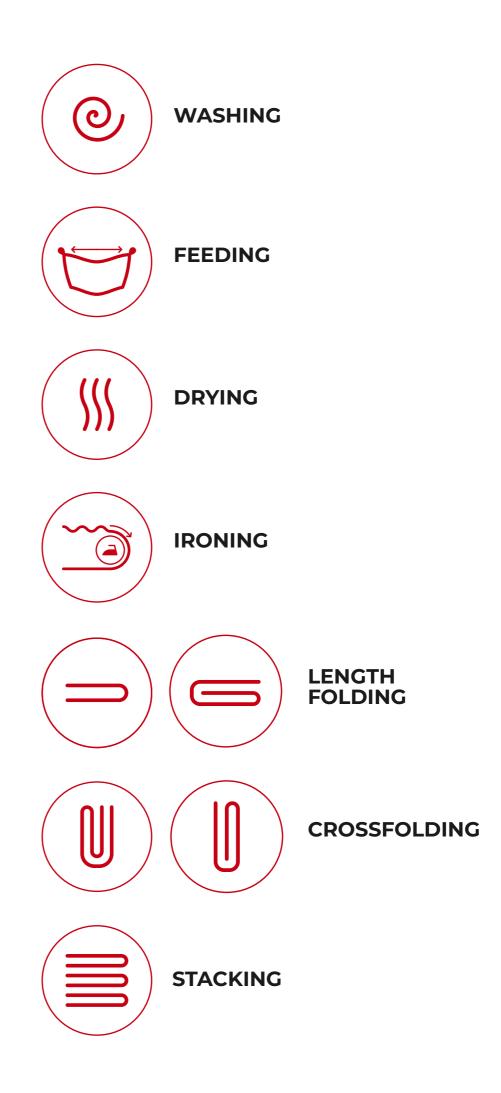

With over 25 years of experience, we are confident and proud of our products in international markets. Why?

The answer lies in our process of manufacture and control. Our production cycle is managed entirely in-company thanks to **our specialized productive workforce.**

The design of our machines is conducted by identifying the needs of the user and the market. Thanks to this, the **Calandre** line provides compact and all-in-one products and is always updated with technological innovations.

Our industrial line satisfies the need for a series of performances and customization necessary for the operational plant of your laundry.

Considering small businesses that need a ready-to-use product, we introduced our line of drying and ironing machinery with turnkey service, compacts and in small sizes that are ready to be operated.

CALANDRE

Our compact and multifunctional machines are designed to work with flat laundry.

Industrial machines for folding and ironing flat linen are designed to simplify the work of the operators and to be able to customize them. Our challenge is to respond promptly to production needs, with tailor-made systems.

Self-drying ironer

It irons and dries small, medium and large linen items.

FEEDING

DRYING

DRYING

The "I" series ironer dries and irons flat linen of different sizes from table napkins to bedsheets. The ironing belts system provides an excellent quality of ironing of the linen while protecting the fabrics from mechanical stress.

It can be equipped, upon request, with an automatic feeder that allows an operator to insert very large items like bedsheets.

It is ideal to be placed above the folding line and can also be used as a stand-alone machine based on the customer's needs.

Ironer-folder

It irons, dries and folds flat linen of different sizes

FEEDING

DRYING

DRYING

LENGTH FOLDING

The "IL" series ironer irons, dries and folds flat linen of different sizes, from table cloths to bed sheets.

It can be equipped, upon request, with automatic feeders that allows an operator to work on very large items such as bedsheets. It is ideal to be placed above the folding line; it can also be used as a stand-alone machine based on the customer's requests. The ironing belts system provides a high-quality of ironing of the linen and protects the fabrics

from mechanical stress.

The machine is practical and flexible and it can be easily used as a simple ironer by excluding the crease function.

The "ILC" series ironer is an innovative solution and represents the result of our constant technological research in the field.

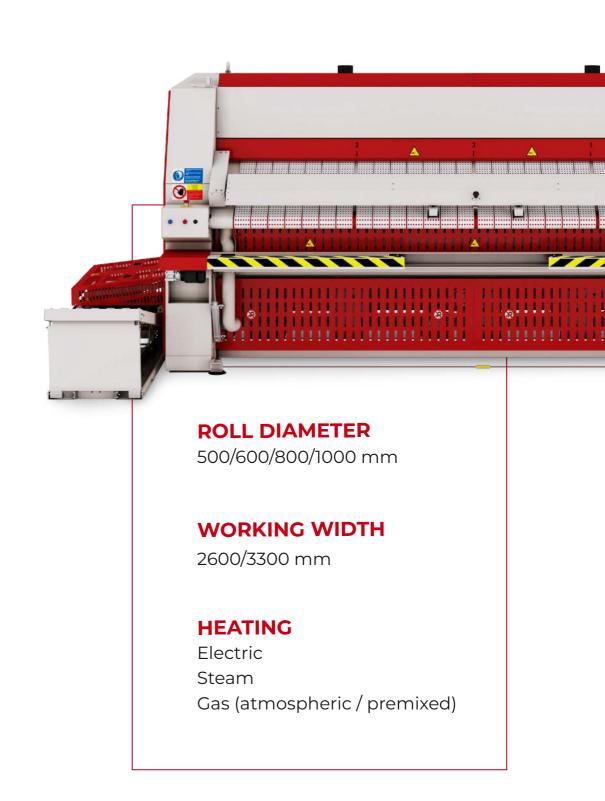

The machine, placed in a 18 square meters space, has numerous features that allows it to insert, iron, fold and pile up linen including the large ones with the supervision of only one operator.

The ironing belts system provides a high-quality of ironing of the linen and protects the fabrics from mechanical stress.

Its automated functions reduce the production costs, increasing exponentially the productivity of the business.

Its touch-screen panel is intuitive and user-friendly that makes it easy and quick to use by the operator. The machine is equipped with an ergonomic flat surface that facilitates the manual insertion of linen and can be customized according to particular needs whether it is operational or logistic. The customer can choose the type of heating, the diameter of the ironing roller, the width and the type and direction of the stacker.

It represents the ideal solution to enhance the entire operating cycle and improve the quality of processing.

AUTOMATIC FEEDER

The automatic feeder is an optional that allows to use the machine by one only operator.

- PREAR COLLECTOR FOR 2
 OR 4 SMALL-ITEMS LINES
- **3** COMPACT SIDE STACKER
- **∜**SIDE STACKER BLADE TYPE

FEATURES

- Roll diameter: 500/600/800/1000 mm
- Working width: 2600/3300 mm
- Heating: electrical, steam, gas (atmospheric/premixed)
- Maximum production up to 290 Kg/h
- Ironing speed adjustable up to 18 m/min
- Automatic control of the ironing speed as the ironing temperature changes
- Automatic cooling of the ironing roll
- One and two operating lines
- Up to 2 length folds and 3 cross folds on one line
- Up to 2 length folds and 2 cross folds on two lines
- Length folds and crossfolds by air jets
- Touch-screen panel with self-diagnostic messages and production data detection
- Fumes extraction system with automatic fan cleaning
- Work programs with fully customised parameters
- Choice of the side and direction of the stacker and of the number of items to be stacked

OPTIONALS

- Vacuum feeding table
- Vacuum feeding table
- Vacuum feeding table
- Rear collector for 2 small-items lines
- Rear collector for 4 small-items lines
- Double pressure on length folds
- Linen reject (dirty/damaged)
- Side stacker blade type or compact
- New Premixed burner (standard for diameter 1000 mm)
- Rear linen collection table

INDUSTRIAL LINE

Machines are equipped with different functions to guarantee high-quality processing.

Each of our machinery is designed to meet your needs. It is possible to add features to facilitate the process.

Feeder with vacuum table. Easy-to-use. Easy linen feeding.

The "IFE" series feeder simplifies and speeds up the manual insertion of the linen. It can be used from small items (table napkins and pillowcases) up to medium (tablecloths and covers) and large items (bedsheets). It can be equipped with a set of optional widening clamps that allow an operator to insert large items in an extremely fast and constant way.

The machine is also equipped with a vacuum chamber that simplifies and speeds up the insertion of the laundry. The mode of the air flow can be changed based on the type of the linen that needs to be inserted.

Flexibility and productivity in ironing.

DRYING

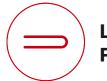

IRONING

The chest-type ironer is excellent for laundry that needs to iron large quantities of linen. It can be equipped with rollers of 1000 or 1200 mm diameter and the number of rolls can vary from 1 to 3.

Industrial folder

Folding machine for medium and large items.

LENGTH FOLDING

CROSSFOLDING

STACKING

The "IFO" folding machine is designed and built to fold flat linen of different sizes from table covers to bedsheets. It is usually placed below the ironer. Thanks to its different features, the operator can customize the folding cycle according to various needs.

Speed and efficiency for terry fabrics.

The "FTI" folding machine is the ideal solution to fold terry cloths and other similar items.

Through the air jets channel system, the machine is able to fold linen of different sizes from small or bidet towels to bath towels. It can be put in manual FTI and automatic FTI3 mode. In automatic mode, the operator can insert different sizes of items and the machine will automatically separate them for each type into 3 different stacks of folded items.

Folder for small items

Versatile and fast folding machine.

The "FSI" folding machine is an excellent solution for folding small items such as table napkins, pillowcases, face towels etc.

The machine can be fed manually by the operator or it can be placed below the ironer for the semi-automatic operation.

The machine has the ability to recognize the type of the items to be folded in order to automatically select the appropriate folding program. The FSIS version is only designed for the folding of napkins.

WASHING AND DRYING MACHINE

For a **turnkey service**

The combination of quality, performance and energy efficiency represents the main features of our washing and drying machines. It is a new way to understand your demand with low-consumption machinery ready to be introduced into the production cycle at full capacity.

WasherIndustrial washer,
designed for energy saving.

DryerHigh energy efficiency industrial dryer.

Industrial washer, designed for energy saving.

The "LA" high-spin industrial washer is designed for laundries that prioritize the process quality and water and energy saving.

By combining the advanced design and technology of the "LA" machine, we are able to reduce the use of water and chemical additives with a significant increase in energy efficiency.

This type of high-spin washing machines, in fact, drastically reduce the residual humidity after the washing process and allow significant savings in processes such as drying and ironing.

This simple and quick-to-install machine guarantees minimum space requirements and maximum performance.

High energy efficiency industrial dryer.

The "ES" dryer stands out on the market due to its energy saving and management cost reduction.

We have obtained a perfect balance between user-convenience and simple maintenance together with an attractive and completely renewed design.

The standard equipment of the inverter and the reverse drum allows an efficient control of the machine and represents a standard in basic range.

"ES" is equipped with a humidity sensor system that apart from its standard features, it also includes the control of the speed of the drum based on the level of humidity increasing the efficiency in the drying process.

Also important in terms of energy efficiency, the recirculation of the air that improves its flow and a complete thermal insulation of the machine.
